Frequency distribution table

	Frequency	Relative frequency	Cumulative frequency	Cumulative US only
California	119	45%	45%	66%
Nevada	17	6%	51%	75%
Oregon	11	4%	55%	81%
Arizona	11	4%	59%	87%
Colorado	11	4%	63%	93%
Utah	6	2%	66%	97%
Virginia	4	1%	67%	99%
Wyoming	1	0%	67%	99%
Kansas	1	0%	68%	100%
None (abroad)	86	32%	100%	
Total	267	100%		

Segmentation of US clients by State

This is a Pareto diagram. The bars show the absolute frequency of each category. In this case this translates to: how many customers are there from each state. For example, there are 4 customers from Virginia. The secondary axis (the orange line), shows the cumulative frequency. For example, California, Nevada, and Oregon together, account for 81% of all purchases.

N.B. Clients that are not from the USA don't have a state value. In the table, they are listed as 'None'. We need to add them to the frequency distribution table, as otherwise, we will get a wrong interpretation of the data. However, as the Pareto diagram represents clients from the USA, we don't have to include 'None' there.
