Skewness

Background

You are given two datasets

Task 1

Identify the skewness of dataset 1. You may use the formula from the lesson, the skewness formula in excel (=SKEW) or you can plot it on a graph

Task 2

Identify the skewness of dataset 2. You may use the formula from the lesson, the skewness formula in excel (=SKEW) or you can plot it on a graph

Solution:

Dataset 1

212

869

220

48

375

86

168

100

Task 1:

Skewness 0.63

The skew of this dataset is positive.

Dataset 2

586

760

495

678

559

415

370

659

529

975

995

947

Task 2:

Skewness -0.37

The skew of this dataset is negative.

Note: sometimes, using a graph to identify the skew can be misleading.

This dataset has a relatively strong negative skew (-0.37).

However, from a histogram with a few bins, you cannot clearly determine the skew.

For best results, we recommend that you use a more precise measure of skewness, such as the formula, instead of a simple graph
