Correlation

SAT scores

Background	You are given data on the SAT scores from the correlation exercise.
Task 1	Calculate the correlation coefficient of the two datasets.
Task 2	Comment on the strength of the correlation between the two datasets

Solution:

	Writing	Reading		(x-x̄)*(y-ȳ)
	344	378		19,490.16
	383	349		19,004.16
	611	503		1,179.36
	713	719		44,714.16
	536	503		234.36
Mean	517	490	**Sum**	84,622.20
			Sample size	5
			Cov. Sample	21,155.55
			Correlation coefficient	0.94

Task 1: The correlation coefficient is equal tc 0.94

Task 2: 0.94 is extremely close to 1, therefore there is a very strong positive correlation between the two datasets
