

Standard normal distribution

z-table

The table summarizes the standard normal distribution critical values and the corresponding $(1-\alpha)$

Example 1: Confidence intervals (and two-sided hypothesis tests)

Question: what is the critical value for a 95% confidence interval?

Step 1: $95\% = 0.95 = (1-\alpha)$
 $\alpha = 0.05$

Step 2: Since we are dealing with confidence intervals (or two-sided tests) we are interested in $\alpha/2$, or better: $(1-\alpha/2)$
 Find $(1-\alpha/2)$
 $(1-\alpha/2) = (1-0.025) = 0.975$

Step 3: Search for the closest value to 0.975 (or the exact one) in the table.
 In this case it is: **0.975**

Step 4: The critical value ($Z_{\alpha/2}$), is given by the sum of the corresponding row and column headers
 $1.9+0.06 = 1.96$

Answer: $Z_{0.025} = 1.96$
