Ice cream shop

Background You have a frequency distribution table with all the sales. You also have the relative frequency from the pie chart problem.

Task 1 Order the table by frequency.

Task 2 Create a bar (column) chart representing the ordered data.

Task 3 In a new column, calculate the cumulative frequency of the data.

Task 4 On a second axis in the same chart, represent the cumulative frequency of the data.

City	Frequency of Ice Cream sold	Relative Frequency	Cumulative Frequency
San Francisco	19,923	40%	40%
LA	17,129	35%	75%
New York	12,327	25%	100%
